

## Series Production or Individual Pieces

### Development/Service

- Customized product development
- Test equipment for prototypes
- Pre-series and small series
- Load change system to conduct longevity or endurance tests under pressure, vacuum, temperature and motion

### Manufacturing

- Machinery and production processes are subjected to continuous improvement
- In-house tool development and design for cost-efficient solutions
- Highly flexible production layout to meet the requirements of either small or large volume series production runs

### Quality assurance

The implemented quality management system is certified according to DIN EN 9100:2009 "Aerospace series - Quality management systems" (technically equivalent to AS 9100 & JISQ 9100). This certification corresponds to QSF-C of the German Aerospace Industries Association (Bundesverband der Deutschen Luft- und Raumfahrtindustrie e. V. - BDLI).

A MASTERFLEX GROUP COMPANY

MATZEN & TIMM - March 2015 -

## Simply flexibly connected

Matzen & Timm is a specialist in the development and manufacture of demanding connection- and hosesystems made from innovative high-tech rubber materials for a variety of industrial applications. Our products are manufactured to customers individual requirements. In this manner even the most complex designs from prototype through to production can be realised.

**We offer individual solutions for ambitious applications!**  
**Approach us!**

### Vacuum handling systems

This is where we are the global leader:  
When heavy loads have to be moved from A to B, our lift tubes are called into action. They can carry weight up to 300 kg without any problems. Various colours and antistatic or electrically conductive versions are available.

### Industrial drying

We have developed special hoses and connectionsystems for the plastic-manufacturing industry. These highly abrasion resistant hoses reinforced with spiral wire are used for instance in the delivery and drying of granules.

### Sound attenuation

Our noise-reducing hoses are ideal for applications where noise absorption is required – e. g. printing machines

### Compressors and generators

All products are hand made from specifically engineered rubber materials. Beside the standard program the individual solutions for the customers make the differences that generate extra benefit for our customers.

### Machinery and plant engineering

Our products are as diverse as there are applications in the industry. We have the right hose or connection part for nearly every industrial field.
